

PNEUMATIC LOW-PROFILE WIPER SYSTEM FOR TRUCK MIRRORS

ABSTRACT OF THE DISCLOSURE

5 A wiper system for a truck mirror includes a pneumatic cylinder configured for attachment to a compressed air source. The pneumatic cylinder has an operating rod that is extendable and retractable. It also has a stroke of approximately the width of the mirror. The pneumatic cylinder is configured for front mounting. A low-profile mounting bracket attaches 10 the pneumatic cylinder to the mirror. The mounting bracket is configured for attachment to the front of the pneumatic cylinder and for positioning the front of the pneumatic cylinder adjacent to or abutting a vertical side of the mirror. A wiper blade attaches to the threaded end of the operating rod of the pneumatic cylinder.
